The Occupational Safety and Health Administration (OSHA) Hazard Communication Standard CFR 1910.1200 (Right to Know) requires manufacturers of hazardous chemicals to provide their customers with Material Safety Data Sheets (MSDS) and employee training information. To ensure compliance with this law, customers have requested MSDS Forms for the products they are purchasing from our Company.

In accordance with the Hazard Communications Standard, this product... Glueboard Fly Traps... is defined as an "Article" under this law (lamps are on a separate MSDS). The standard defines "Articles" as follows (CFR 1910.1200, Section C - Definitions):

"Article" means a manufactured item: (i) which is formed to a specific shape or design during manufacture; (ii) which has end use function(s) dependent in whole or in part upon its shape or design during end use; and (iii) which does not release, or other otherwise result in exposure to, a hazardous chemical, under normal conditions of use.

The Standard further explains that the requirements of this Standard do not apply to "Articles" (Section B - Scope and Application, Paragraph 5).

Following the intent of this Standard, the following are the major components of a finished Glueboard Fly Trap:

- Galvanized Steel with Vinyl Covering; or Stainless Steel;
- Screws, bolts, nuts, washers of steel or stainless steel;
- Copper insulated cords/wire and connectors of various types;
- Plated metal grill;
- Black Light Lamps (covered under a separate MSDS);
- Sticky Trap Glueboards.

J.T. EATON & CO., INC. has a firm commitment to comply with the law. However, the Company is not required under the Hazard Communications Standard CFR 1910.1200 to provide MSDS Forms for its products. Completion of this form does not constitute an acknowledgment of its application to the IOC® product.
