Mount on Beams or Ledges

Hard to reach areas such as beams and ledges can be serviced with a grab stick used by animal control. The technician pictured here is using a noose type grab stick. Grab sticks with jaws will work equally well. This station has had heavy duty velcro placed on the beam and attached to the station base to hold the station firmly to the beam.

Wire or nylon ties can also be used.

Obviously, some ledge areas, and/or difficult to reach areas may not facilitate the use of the Velcro and/or the grab stick technique. Such areas may have to be serviced using ladders and direct hand placement and retrievals.

Mount Closer To Walls Than Standard Bait Stations

The JT EATON #902 TOP LOADER™ Bait Station can be placed closer to walls than most bait stations reducing the chance of damage by towmotors and other equipment. The JT EATON #902 TOP LOADER™ Bait Station has two convenient holes for screws or can be secured with strong construction adhesive.

Mount at Ground Level

The JT EATON #902 TOP LOADER™ Bait Station can be secured to fences with nylon ties or wires. Insert the ties or wires through openings at the top edge of the horizontal tube to help prevent the station from moving.

Mount on Fence Rails

Attach to Tree Branches

The JT EATON #902 TOP LOADER™ Bait Station can be secured to tree branches with nylon ties or wires. Insert the ties or wires through openings at the top edge of the horizontal tube to help prevent the station from moving.
