- ***Other Destructive
Climbing Insects***

IMPORTANT: Read directions before use:

For best results, secure a 4" wide band of waterproof paper or similar wrapping material around trunk of tree or vine, keeping out of reach of children or pets.

Make certain to block all crevices beneath band.

Apply a 3" wide by 1/6" thick coating of
JT EATON[®] CRAWLING INSECT GEL-TRAPTM
to wrapping material with a putty knife
or disposable paddle.

NEVER apply directly to young or thin-barked trees.

Coat all other access routes to foliage. On mature
rough-barked trees JT EATON[®] CRAWLING
INSECT GEL-TRAPTM can be applied
to trunk directly.

Disposal: *Do not reuse empty container;
wrap and place in trash.*

For best results band trees in early spring
and fall before insects appear.
