

BED BUG BARRIER TRAYS

A New Addition To The JT EATON™ Family Of Bed Bug Control Products.

These sturdy stainless steel Bed Bug Barriers are essential for a complete pest control program. Barriers are used to monitor the presence of bed bugs as well as the progress of a bed bug control program.

BED BUG BARRIERS ARE EASY TO USE:

- Simply place legs of bed or furniture into the barrier.
- Be sure to keep sheets, blankets, bed covers and pillows from touching the floor. Beds and furniture should not be in direct contact with walls.
- Bed Bugs can not crawl up the exterior into the dish. This will keep new bed bugs from gaining access to your bed or other legged furniture.
