1. WINDING
No bait is needed with the JT EATON™ WIND-UP™ Multiple Catch Mouse Trap. Simply turn the winding handle clockwise 6 to 8 times (complete 360 degree turns) to catch many mice with one setting. Trap is now properly set.

2. PLACEMENT
Mice will find the entrances on each side of the trap with their whiskers. They will enter looking for harborage or safety and trip the trigger.

PARALLEL
Perpendicular

Place the JT EATON™ WIND-UP™ Multiple Catch Mouse Trap 1 1/2” to 2” parallel to the wall or perpendicular to the wall in an area where mice are known to travel.

3. EMPTYING
First slide the top lid back, then pull up the end plate and dispose of the mice. Use CAUTION when opening trap. Do not allow live mice to escape. Have a container for disposal ready.
