

# REPEATER

## REUSABLE LIVE CATCH TRAPS

# TRAP LIKE A PRO

MULTIPLE-CATCH LIVE TRAPS ARE PREFERRED BY PEST MANAGEMENT PROFESSIONALS.

### HUMANE

No poison is used and live rodents can be relocated and released.

### REUSABLE

Easy to use.  
No resetting or winding.  
Non-jamming mechanical components.

### NO BAIT NEEDED!

Mice are naturally inquisitive and will enter the trap when placed along a wall.

## DO NOT USE BAIT.

*Some baits can become lodged in the trap and cause it to fail.*

### PRO TIPS

- Where pest activity has been observed, place trap lengthwise against a wall or an object. Position the trap so the entrance hole is closest to the wall or object. Pests are naturally inquisitive and run along walls.
- Find where pests are gaining entrance into the home or structure and seal off all areas of entrance. Be sure to seal holes as small as a dime.
- To increase your success, place traps every 12 feet in residential areas.
